# Sky-Tec Flyweight™ Starters & Solenoids Aircraft Fit Guide

*Sky-Tec Flyweight™ Starters*  
*350 Howard Clemmons Rd*  
*Granbury, TX 76048*  
*817-573-2250*  
[www.skytecair.com](http://www.skytecair.com)  
[richc@skytecair.com](mailto:richc@skytecair.com)

# Caution:

## Please Read Before Using This Guide

1. This document is NOT the FAA-approved Applicable Models List. Matters of certification eligibility can be found at [www.skytecair.com/eligibility.htm](http://www.skytecair.com/eligibility.htm)
2. This document is simply intended as a **guide** for fitting most aircraft by type. However, due to variances between aircraft due to manufacturing changes, modifications, cumulative years of maintenance and/or conversion, **it is nearly impossible to definitively recommend the correct starter for any particular aircraft based on make/model alone.** So please only use this document *AS A GUIDE ONLY*. When in doubt, call the Sky-Tec factory for confirmation. **Installation of the wrong starter will void the factory warranty.** Sky-Tec will not warrant starter wear or damage on starters (or engines) where a starter is installed incorrectly (including wrong ring gear teeth or wrong voltage, etc.) or is used in an inappropriate application.
3. There may still be a starter to fit an aircraft whose entry shows “no starter available”. Many older aircraft have been converted and upgraded. Confirm the engine make/model before determining a Sky-Tec is or is not applicable.
4. Please note the use of ring gear tooth count (on Lycoming engines) and aircraft voltage in the model numbers of all Sky-Tec starters. If your aircraft ring gear teeth and/or voltage do not match the numbers in the model recommended for your aircraft, DO NOT ORDER THE STARTER without first contacting Sky-Tec or adjusting your model number accordingly.
5. Recommendations are suggested for aircraft with factory standard equipment. Factory or after-market installed options such as air conditioning may affect the applicability of the Recommended Starter. Piper singles with air conditioning must utilize the NL-series starters.
6. Please do not assume ring gear tooth count (on Lycoming engines). Through the years, mechanics have been known to replace ring gears with whatever model they had laying around their shops at the time the work was performed. Therefore it is imperative that the installer CONFIRM RING GEAR TOOTH COUNTS ON ALL LYCOMING INSTALLATIONS.
7. IF YOU ARE UNSURE WHETHER THE STARTER YOU RECEIVE IS CORRECT, PLEASE DO NOT MOUNT IT. Call the factory first. Mounting the starter will preclude you from returning the starter to Sky-Tec as new/unused. Mounting the starter places ‘bite marks’ around the mounting holes and will have to be treated as *used* starters (no new exchange will be permitted).
8. Never use a XLT, PM or LS (permanent magnet) starter on a helicopter. Sky-Tec ONLY recommends HT starters for use on helicopters.
9. And finally, this list is only as comprehensive as we could attempt to make it. We realize there are omissions and variances. We’ve done our best to include the majority of general aviation aircraft models. If you cannot find what you are looking for (or what you are looking for is not where you’d expect it), we encourage you to speak with the factory to find the best starter for your particular application.

Do not use this guide unless you have read P.2 Data in this document is NOT FAA approved. For FAA PMA Eligibility see [skytecair.com/eligibility.htm](http://skytecair.com/eligibility.htm)

1214

## WARRANTY

Sky-Tec Partners, Ltd. ("Sky-Tec") warrants its starters to be free from defects in materials and workmanship for a period of two years from the latter of:

1. the date of purchase by the end user (as supported by an invoice copy or similar document), or
2. the date of initial first installation on an aircraft (a copy of the logbook entry showing the installation date req'd).

What *is* covered:

- Factory repair or factory's replacement of any starter Sky-Tec determines has failed under the terms of this warranty if and only if the original starter is sent to Sky-Tec for evaluation.

DO **NOT** PURCHASE A REPLACEMENT STARTER FROM A DEALER. Sky-Tec will not offer warranty credit for replacement starters purchased through a dealer. All warranty claims must be handled directly with Sky-Tec. Labor expenses to remove and replace the starter are **not** covered by this warranty. Before returning any starter to Sky-Tec for warranty consideration, first consult the Aircraft Troubleshooting Guide supplied (also available online).

To return a starter to Sky-Tec for service, first obtain a return authorization electronically online at [www.skytecair.com/obtain\\_ra.htm](http://www.skytecair.com/obtain_ra.htm). Starters returned to the factory via UPS with a valid Return Authorization number are typically repaired or replaced the same day they are received. Other carriers and/or circumstances may increase turn-around to 1-2 days.

Alternatively, Sky-Tec may offer a warranty exchange program to any customer requiring expedited replacement. The customer will be responsible for purchasing a replacement starter directly from Sky-Tec and returning their original starter directly to Sky-Tec for evaluation. If the starter is found to have failed under the terms of this warranty, appropriate credit will be given to the customer for the value of the starter plus domestic UPS Ground shipping charges. Customers will be responsible for any additional expedited shipping charges. Alternatively, a customer may receive core credit regardless of warrantability of the returned starter.

Sky-Tec makes no warranty as to suitability of its products for the intended application.

## WARRANTY DETAILS

What is **not** covered:

- Labor to Remove & Replace the starter;
- Any additional expense(s) including labor, inconvenience, transportation or loss of business due to any starter failure;
- Damage to any other engine or aircraft components;
- Additional costs born by purchases from any third party, agent or distributor besides Sky-Tec to replace any failed starter;
- Damages resulting from a starter being used in any improper application;
- Damages resulting from improper installation. Ring gear/starter mismatches are the sole responsibility of the installing mechanic and/or aircraft owner;
- Starters serviced in the field by removing or replacing any components not specifically instructed, permitted and supplied by Sky-Tec;
- Starters damaged by impact, shock, excessive shaking or other physical abuse (physical evidence: dents to starter components, loose or stripped connection terminals, and bent components not caused by defects in components, design or workmanship);
- Starters determined to have failed by application of *voltage* in excess of amount specified on starter name plate (physical evidence: armature will be splayed and/or exploded due to the forces of over-rotation and the associated centripetal force WITHOUT discoloration of commutator bars or heat warping of brush insulator);
- Starters determined to have failed by application of voltage in excess of cranking *time* specified on the **starter tag** that ships with all starters (physical evidence: copper armature bars discolored to white/purple hues, brush wires are discolored similarly, brush insulator is warped or scorched, smell of burnt metal evident, etc.);
- Starters containing any foreign substance or debris including motor oil, cleaning agents or foreign particles not found in the starter's normal composition (physical evidence: presence of substance within starter causing solenoids or motor brush assemblies to wear prematurely and/or function improperly);
- Starters within specifications that operate normally (i.e. the starter is good). Warranty applies to starters with defects, not good starters. Starter will be returned to customer. If refused, core credit may be given to the customer should the core be determined to be rebuildable at Sky-Tec's sole discretion; or
- Starters determined to have failed by a counter-rotational force caused by the engine's ignition system failing to retard all sparks at or past piston TDC during the cranking period aka "kickback" (physical evidence: bent or broken mount, broken or displaced magnets, broken or chipped brush assemblies, broken drive components and/or excessively worn or damaged drive gear teeth). Exceptions: Starters which feature Sky-Tec's exclusive Kickback Protection System (KPS®) which includes NL, HT & ST2 models.

# Starter Model Cross Reference by OEM Manufacturer

## PLEASE READ THIS CAUTION BEFORE USING THE TABLE BELOW!

THE PRIMARY SOURCE OF FIT DATA IS THE AIRCRAFT FIT GUIDE THAT BEGINS ON THE NEXT PAGE. USE THIS CROSS REFERENCE TABLE ONLY IF NO OTHER AIRFRAME DATA IS AVAILABLE OR TO REPLACE LISTED MANUFACTURER'S STARTER WITH A SKY-TEC. AS WITH ALL STARTER MODEL RECOMMENDATIONS IN THIS GUIDE, PLEASE FAMILIARIZE YOURSELF WITH NUMBERED ITEMS ON PAGE 2 OF THIS FIT GUIDE. THESE RECOMMENDATIONS ARE ONLY A GUIDE. THE INSTALLING MECHANIC HAS ULTIMATE RESPONSIBILITY FOR ENSURING THAT THE STARTER IS FULLY COMPATIBLE WITH THE AIRFRAME AND ENGINE BEFORE INSTALLING THE STARTER.

## Notes

1. Sky-Tec Starter is the original equipment starter
2. Modification of oil cooler bracket may be required
3. If oil cooler is in front of engine, choose PM model
4. BCE-6 (battery cable extension) may be required
5. Baffle modification required
6. Cowl bumper bracket modification required
7. If using RV-7 “Snorkel” induction, may have to use 149-12LS (was used by Van’s to form the snorkel)
8. Airframe manufacturer mounted the aircraft starter contactor (“firewall” solenoid) directly to the OEM Starter – you will need to straighten mounting tabs and relocate to suitable place on the firewall
9. Aircraft with sandcast TCM 520 engines (alternator in rear) are notoriously difficult to crank smoothly. TCM utilized a 32:1 starter Adapter on sandcast motors that no known starter is especially good at cranking. Sky-Tec makes no claims that our ST3 starter will crank sandcast TCM520 engines any better than anyone else’s starter. The ST5 series starter may do a better job if sufficient power is available to the starter.
10. PA-31 right engine installations may require the use of an installation spacer, Sky-Tec PN 25099, and may require the installer to drill-out the threads on the alternator boss of the starter. See the starter installation instructions and [http://www.skytecair.com/images/P2/PA31\\_NLR\\_Install.jpg](http://www.skytecair.com/images/P2/PA31_NLR_Install.jpg) for details and more information.
11. Some Robinson Helicopters originally configured with Prestolite starters utilized a firewall-mounted starter contactor relay. The 149-NL starter can be installed on those ships that still have the firewall-mounted starter contactor relay. Robinson Helicopters originally configured with B&C starters or Sky-Tec HT starters cannot utilize the 149-NL starter as the aircraft has no installed/certified firewall-mounted starter contactor relay and the NL starter S-terminal is not accessible for this function. However, 149-NL/ec starters (due for availability late 2007) may be used as their S-terminal is accessible for dual function as the starter contactor relay. Confused yet? Call Sky-Tec now.
12. Robinson Helicopters originally configured with B&C starters utilized a proprietary aluminum starter-alternator strap that is used only on these aircraft (Robinson PN B299-3). When replacing the B&C starter with any Sky-Tec starter, you must also order and replace the aluminum starter-alternator strap with the standard length steel starter-alternator strap P/N 74323
13. One customer has called the factory to claim the NL will not fit on his Mirage. Dozens (if not hundreds) of other Mirage owners have used the NL starter for years with no installation issues.
14. Cessna OEM production replaced the Lamar series starters with Sky-Tec starting in 2006. Via SB07-80-01, Cessna recommends purchasing MK172-80-01 or MK182-80-01, which includes all parts required to do a first class upgrade to the Sky-Tec 149-NL/ec starter. Order the starter separately.
15. The KCST2 is an STC eligible kit requiring modification to the engine & airframe for installation.
16. NO FIT on aircraft with electronic tach sensors mounted to the nose of OE Electrosystems Starter.
17. Socata changed from 14 to 28 volt electrical systems determined by serial number (applicable to all models): Serial Numbers 823 to 849 plus s/n 888 are 24Volt. All serial numbers 947 and higher are also 24Volt.
18. Air-conditioned Lycoming-powered Piper singles MUST use NL-series starters ONLY. Use 149-NL/ec for 24V aircraft.

Do not use this guide unless you have read P.2 Data in this document is NOT FAA approved. For FAA PMA Eligibility see [skytecair.com/eligibility.htm](http://skytecair.com/eligibility.htm)
